Changed my filing to date/filename.

In series each folder may contain 2 extra folders, extras and episodes.

Extras contains all material not an episode: making of, bloopers, behind the scenes, cast, etc.

Folders named "episodes" will contain the season episode lists downloaded from IMDB. Whether I get around to naming each episode by its name or not there will be a list of all episodes. The nice thing about these lists is that each episode will have a synopses about the individual episodes.

By naming episodes I have discovered some series with 1 or more episodes missing and replacing them.
